## Current Events and the Economy

- Vaccinations continue to roll out across the U.S. with close to 40% of the population now fully vaccinated. As we enter June, daily new COVID-19 cases in the U.S. are down over 90% from peak levels in January.
- On the economic front, U.S. Real GDP rose at an annualized pace of +6.4%. Inflation, measured by CPI, rose at 4.2% year-over-year as current prices are still being compared to prices during the most severe portions of the lockdown in 2020.
- The housing market is hotter than any time in recent history - record low inventory from a decade of underbuilding, low mortgage rates and government stimulus are putting upward pressure on prices. Per S&P Case-Schiller data, U.S. home prices are up 13.2% versus last year, the largest increase since 2006. All of the 20 largest metropolitan areas in the U.S. have seen price increases with many showing double digit increases.

## Asset Performance

- Equity markets saw a slight pause in their rally in the U.S. with large core (-0.4%) falling slightly. However, international large core (+2.2%) and emerging markets (+1.1%) contributed gains - highlighting the benefits of global diversification.
- On the factor front, momentum (-2.4%) struggled in May, while U.S. large quality (+0.3%) and U.S. large value (+1.9%) had positive months. Internationally, value stocks also managed to outperform their counterparts across both large and small caps.
- Inflation-adjusted bonds (+1.1%) led the way among fixed income securities. Multi-sector (+0.5%) along with U.S. short-term (+0.4%) and intermediate-term (+0.4%) also enjoyed strong months.
- Among alternatives, real assets (+2.0%) and trend following (+1.6%) were the strongest performers in May.

## Perspective

- Despite the strong run in recent months, U.S. value stocks are trading at their cheapest level since World War II excluding the dotcom bubble. Historically, extreme levels of cheapness have preceded periods of strong outperformance for value stocks relative to growth stocks.
- Historically, commonly known factors such as size, value, quality, and momentum post positive returns about as frequently as stocks in general. Since factors tend to outperform and underperform at different times, diversifying across these factors may enhance risk-adjusted returns.
- Over shorter periods rebalancing may seem trivial, but it can add significant value over longer time horizons.

**Endnote 7:** Stocks are represented by the MSCI ACWI IMI NR USD Index. Bonds are represented by the BBgBarc US Agg Bond TR USD Index. For the 'Buy and Hold 60/40', the investor is assumed to start with \$600,000 in stocks and \$400,000 in bonds. The investor simply holds the positions and accepts the changes to the portfolio allocation mandated by buy and hold returns. The 'Rebalanced 60/40' investor is assumed to start with the same \$600,000 in stocks and \$400,000 in bonds. However, when this investor's stock allocation drifts below 55% or above 65%, the portfolio is automatically rebalanced back to target. This exhibit does not take management fees, taxes, or taxes strategies such as tax loss harvesting nor tax considerations such as capital gain taxes into account. This case study utilizes returns from 1/1/2000 through last month end.

Savant Wealth Management ("Savant") is an SEC registered investment adviser headquartered in Rockford, Illinois. Past performance may not be indicative of future results. Different types of investments involve varying degrees of risk. All investment strategies have the potential for profit or loss.

Historical performance results for investment indices, benchmarks, and/or categories have been provided for general informational/comparison purposes only, and generally do not reflect the deduction of transaction and/or custodial charges, the deduction of an investment management fee, nor the impact of taxes, the incurrence of which would have the effect of decreasing historical performance results.

Data and illustrations reflect hypothetical, back-tested results that were achieved by means of the retroactive application of a back-tested portfolio and, as such, the corresponding results have inherent limitations, including: (a) the portfolio results do not reflect the results of actual trading using investor assets, but were achieved by means of the retroactive application of each of the referenced portfolios, certain aspects of which may have been designed with the benefit of hindsight; (b) back tested performance may not reflect the impact that any material market or economic factors might have had on the adviser's use of the hypothetical portfolio if the portfolio had been used during the period to actually manage investor assets; (c) for various reasons (including the reasons indicated below), clients may have experienced investment results during the corresponding time periods that were materially different from those reflected for the portfolio.
